

YOUR TRADING COMPANION

Consistency Rules

The primary objective of a proprietary trading firm is to identify consistently profitable traders adhering stringent risk management practices. This involves a thorough evaluation of traders, followed by the provision of capital for their trading activities. This core mission becomes compromised when inexperienced traders misuse the system in pursuit of short-term inconsistent gains, either by engaging in high-risk trading strategies or by taking advantage of any weaknesses in the system.

To protect our capital, MBFX Funding has implemented a set of Consistency Rules.

1. Max Lot size limit in any given time:
 - a. 1 standard lots in \$10,000
 - b. 2.5 standard lots in \$25,000
 - c. 5 standard lots in \$50,000
 - d. 10 standard lots in \$100,000
 - e. 20 standard lots in \$200,000
2. A withdrawal request must not include profits exceeding 25% derived from a single currency pair, in one direction in a single day; any surplus beyond this limit will not be recognized as eligible for withdrawal.
3. Order-Brust is not allowed as it considered as gambling. A trader is not allowed to open more than 2 trades in any pair at one time in one direction.
4. The maximum permissible number of pending orders in one pair are limited to four, consisting of two sets of pending orders, each comprising one pending buy order and one pending sell order.
5. Scalping is a permissible trading strategy, but any trade closed within a 5-second timeframe will be categorized as high-risk gambling. Consequently, profits generated from such trades will not be included in the calculation of withdrawable profits.
